Final plans (2 copies) for the Oil/Water Separator Assessment, Carswell AFB, are forwarded for your information. Additionally, comment responses from the contractor are also attached. Please note not all your comments have been specifically incorporated into the final plans. Specifically in response to your question #2, permit provision VIII.A.2.(4) refers to requirements for conducting a RCRA Facility (OWS Assessment) that is intended to only determine the absence or presence of contamination. Should the OWS Assessment show the need for additional investigation, an RFI will be conducted and all requirements stated in the permit will be followed.

The results of this assessment will indicate one of two possible conditions. First, there is no evidence of contamination and the disposition of the oil/water separators will be made upon completion of all work. Second, there is contamination at one or more of the separators. If this is the case the separator will either be removed and confirmatory sampling done to ensure there is no further contamination, or, additional investigation is necessary. In either case, you will be notified as to the specific action to be taken with your concurrence/approval. Again, all further work will be done in accordance with the RCRA permit.

If you have any questions, please contact the undersigned at (210) 536-5261.

  
CHRISTOPHER D. HOBBS  
Team Chief, Base Closure  
Restoration Division
